The WELDA difference

For many years Welda Windows and Door Industries has helped 1000's of homeowners like yourself:

Old in-efficient windows have represented a major source of unwanted heat loss, discomfort, and condensation problems. Investing in new windows for your home will not only save $100's and $100's of dollars on heating and cooling costs now and for years to come, it will also increase your home's value and improve your home's comfort. An older window with a lower glass temperature feels colder because more heat is radiated from a person's body to the window. Cold glass can also create uncomfortable drafts as air next to the window is cooled and drops to the floor. This sets up an air movement pattern that feels drafty and accelerates heat loss. High- performance windows will result in a higher interior window temperature in winter provides greater comfort.

Welda offers a wide variety of window styles and colors to choose from. All of our windows are the highest quality products. All our installations are done by certified SAWDAC installers.

12 Reasons

WHY MORE THAN 30,000 HOME OWNERS HAVE CHOSEN WELDA WINDOWS AND DOORS SINCE 1984

1. Peace of mind with a Lifetime Warranty

10. Non-recycled superior window framing material which outperforms competitors products
11. Fusion welded sash and frame on vinyl window provides maximum seal
12. Financing available (O.A.C.)

Go GREEN with Super Saver Glass

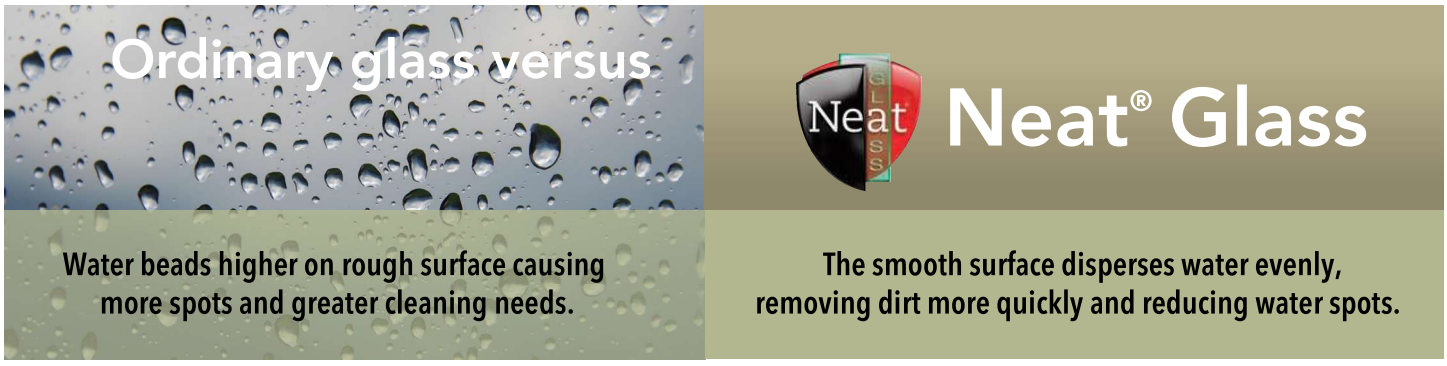
Ultimate Performance:

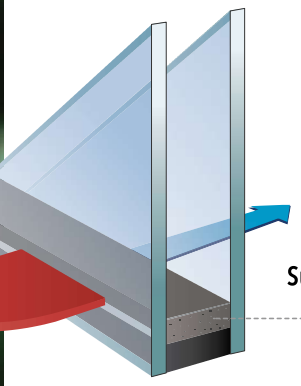
- Provides the ultimate in Solar Heat control
- Blocks 95% of damaging UV rays
- Retains 98% of home heat and air conditioning
- R value of 4.17 center of glass
- Comes standard with Neat® coating on exterior glass surface

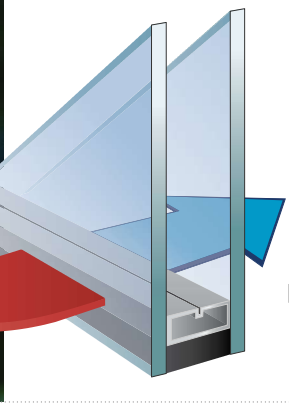
How Neat® Glass Works

Neat® Glass is the naturally clean glass. It harnesses the sun's UV rays to loosen dirt so water can rinse it away leaving windows virtually spotless. Your windows will stay cleaner longer and clean easier.

- Neat® Glass comes standard with all Welda products when ordered with Super Saver Glass
- Neat® Glass works even on cloudy days as 80% of the sun's UV rays get through
- A thin layer of silicone dioxide makes the exterior glass surface super smooth
- The super smooth surface of Neat Glass allows the water to "sheet off" and evaporate quickly greatly reducing water spots







Super Spacer® Technology: A lifetime of warmth

The all-foam formula of Super Spacer® is proven to be less conductive providing optimal thermal performance, meaning it allows less heat to escape from your home than typical metal spacers.

Inside quality built windows you will find a spacer between the layers of glass. The spacer is usually constructed of steel or metal. Its purpose is to separate, seal and insulate the layers of glass, helping to keep your home warmer.

We utilize the best Super Spacer constructed from flexible, 100% polymer foam. This allows it to expand and contract. This breathable foam is able to absorb moisture, and stop the formation of condensation.

A Quieter Home	Our durable Super Spacer® acrylic bond can help reduce outdoor noises such as winds and auto traffic by up to 18%.
The Window to Healthier	The Super Spacer® quickly absorbs moisture and reduces condensation, restricting the growth of mould & mildew.
Reduces Heat Loss	Metal spacers can absorb heat and allow it to escape. Super Spacer® polymer foam helps contain heat, keeping more inside your home.

DOUBLE PANE OR TRIPLE? A GUIDE TO HELP YOU DECIDE

SUPER SAVER DOUBLE-PANE

Provides a good balance between blocking solar heat and harmful rays in the summer and letting the sun's natural energy in during the winter while providing high levels of visible light. If you are looking for glass which provides a good balance between summer and winter comfort while reducing energy costs, this is the glass for you.

SUPER SAVER TRIPLE-PANE

Three insulated panes of glass provide year-round performance with the highest degree of solar control possible. In the summer, the special coating on the glass is formulated to block solar heat for incredible comfort.

Casement Windows

Casement Windows swing open (like a door) to provide superior ventilation, and are operated by a crank handle. Casement Windows can open out to the left or right.

Also available in Awning Windows

Awning Windows operate much like a Casement Window This Window opens out with a scissor hinge on the bottom of the window. It also opens by cranking a handle which pushes the bottom of the sash out.

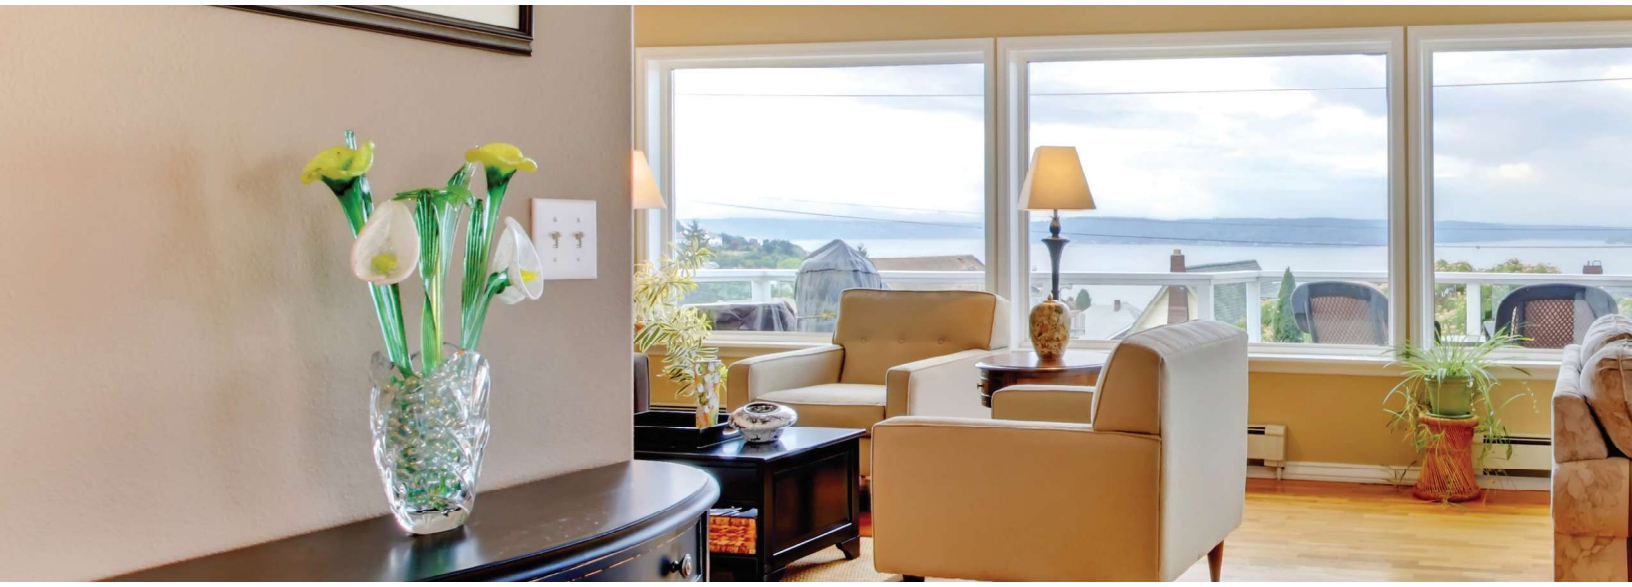
Double Hung Windows

Double Hung Windows can offer your home a more traditional look. But, unlike the windows of old, Welda offers energy efficiency, as well as case of cleaning and maintenance. Both the top and bottom sashes move up and down, and pivot towards the interior for simple cleaning.

Also available in a Single-Hung Window

A stationary sash window can be paired with a Single Hung sash which moves up and down, and tilts in for ease of cleaning and maintenance. A screen is included that covers half of the window.

CREAM	SABLE	CHESTNUT
BROWNSTONE	SANDALWOOD	DOVER GREY
BLACK	PEBBLE	SLATE
IRON ORE	COMMERCIAL BROWN	



Double Tilt Slider

A sliding window offers your home an energy efficient option to the traditional Casement and Awning style. A Double Tilt Slider includes two sashes that slide side to side, and a screen that covers the entire glass area. Both sashes can tilt into the room for ease of cleaning and maintenance.

Also available in a Single Tilt Slider

A single stationary sash is paired with a second sash, which moves side to side and tilts into the room for ease of cleaning and maintenance.

Double Lift-Out Slider

These low-maintenance slider windows use heavy-duty brass rollers. Each panel can easily lift-out for cleaning and maintenance. Both sides slide for maximum ventilation, and combine great looks with excellent efficiency.

Single Lift-Out Slider also available

A single stationary sash is paired with a second sash which moves side to side, and can be lifted out for ease of cleaning and maintenance.

Bow Window

Bow Windows provide expansive views of the outdoors, and create another dimension to your home. Using a series of four or more adjoining window units (usually five), they project out from the wall of the home. Each unit can be stationary, operational, or a combination of both. You can also create an elegant window seat, breakfast nook or plant ledge within the bow area.

Bay Window

Bay Windows can make it feel like you've expanded your room into the outdoors. Typically, a large window is positioned between two Double Hung or Casement Windows forming one large viewing area.

Building a Better Window

It doesn't bother us when people take Welda windows for granted, because we never do. Every product - from our smallest decorative shape to our largest fixed picture window - receives the same attention to detail and the same unwavering commitment to quality. You may not see it by simply looking, but each one is manufactured with over 30 years of innovation, technology and expertise built in.

From the glass we use to the frames we design, your Welda window is engineered for maximum efficiency and life. All we ask is that you remember: we don't do all this to exceed our own standards, we do it to exceed yours.

Our Exclusive Non-Prorated Transferable Lifetime Warranty

We stand on our commitment to provide only the finest materials and workmanship in every Welda product. We back that promise with our exclusive Non-Prorated Transferable Lifetime Warranty.

Innovation through experience

OVER 30 YEARS OF PERFORMANCE

Our mission is to produce a quality, energy-efficient window which is custom built with care, built better to perform in the most severe weather conditions.

Our process for perfect windows

Quality doesn't happen by accident. From the time an order is placed, a seamless process with over 100 check points at every stage of manufacturing ensures a perfect vinyl window is delivered to your home - on time, every time. We take quality control very seriously which is why we can offer you the the most comprehensive warranty in the industry.

We take great pride in our quality control process, where the utmost care and attention to detail is coupled with state-of-the-art technology - providing every customer with customized windows that are simply built better.

Our Windows are CSA certified!

Do not confuse CSA Certified Windows with the less rigorous standard sought by most window manufacturers, such as: CSA Approved, CSA Compliant or CSA Tested windows. Our Windows are CSA Certified, consistently achieving the highest possible CSA ratings within their class. To achieve CSA Certification, our Windows are not only tested in a CSA lab, but are subject to random plant audits. This ensures that the windows are actually produced using the same production process and the exact same part specifications as those originally tested. In addition, Our windows meet or exceed ENERGY STAR® specifications.

Simple values ensure a superior product

Utilizing only quality materials, expert craftmanship, personal attention to detail and the latest state-of-the-art technology, we adhere to the highest standards in the industry. We ensure that every customer receives excellent service before, during and after purchasing our products.

From the time your order is placed to the time it's delivered, every aspect of your window has been carefully inspected.
